

VIRTUAL COMPETENCY HUB

NHP

Integrated Architecture® Tools: Integrated Architecture® Builder and ProposalWorks™: basic lab

The Integrated Architecture Tools lab is designed to provide attendees with a hands-on learning experience with Rockwell Automation's Integrated Architecture Builder (IAB) and ProposalWorks (PW). Participants will learn how IAB and PW can help you select automation products, lay out control systems and generate proposals and bills of material for your projects with accuracy and efficiency – free of charge.

The virtual lab includes a product presentation followed by a hands-on lab. The total duration of the session is 2 hours.

What attendees will learn from hand-on labs:

- Launch Integrated Architecture Builder, select and configure a controller, communication module, I/O, network switch and topology
- Generate the hardware and network
- Create a project bill of materials and use Project Checker to detect errors and generate a report
- Launch ProposalWorks and learn its key features and menu options
- Validate devices via library, copy/paste and import methods
- Migrate obsolete devices
- Export data to MS Office suite.

Participants are required to use their own PC and we recommend the following requirements for optimal experience:

- Microsoft account
- Internet connection (min 5Mbps)
- Two screens

To register your interest, scan this QR code, or contact your local NHP representative.
