

VIRTUAL COMPETENCY HUB

NHP

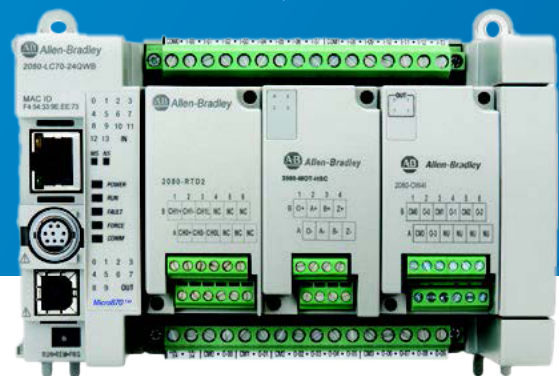

Experience MicroLogix™ migration tools for modernising to Micro800™ controllers

The MicroLogix Modernisation Virtual Competency Hub lab is designed to provide attendees with a hands-on learning experience with the latest MicroLogix migration tools to modernise to the latest Micro800 platform. Experience how these easy steps, using the latest software features and migration wizards simplify your modernisation journey and help improve your system longevity.

- Convert existing MicroLogix hardware into the Micro800 equivalent using Integrated Architecture Builder
- Run and test existing MicroLogix program using RSLogix Emulate 500
- Convert MicroLogix program to Micro800 using Connected Components Workbench software
- Run the converted program using Micro800 Simulator
- Using the change controller feature, convert the simulator project to a selected Micro800 controller
- Use the copy/paste method to move program rungs directly from RSLogix 500 to Connected Components Workbench software.

Participants are required to use their own PC and we recommend the following requirements for optimal experience:

- Microsoft account
- Internet connection (min 5Mbps)
- Two screens
